

Quality Policy

Global Pipeline Engineering has become a world-class company by satisfying the expectations of its customers and for its reliability. This reputation has been earned by Global Pipeline Engineering through its technological leadership, the quality of its services and products, dedicated and skillful participation of its workforce and their relentless adherence to ethics and commitments. Global Pipeline Engineering' objective now is to be the best in its class.

The only way to attain this objective is to embed the quality across a traceable, documented and continuously improvable management system that can be implemented independent of individuals.

To that end, Global Pipeline Engineering' current Quality Assurance System is replaced with a new **QUALITY MANAGEMENT SYSTEM** to regulate all factors, processes and functions that relate to quality. The new system is developed and implemented based on the 2008 edition of international **ISO 9001** quality standards.

Global Pipeline Engineering' quality related targets and commitments are defined by its executives vested with the responsibility of implementing its Quality Policy. The said implementation will be executed by the dedicated and unconditional participation of all Global Pipeline Engineering employees within the framework of the organizational structure, responsibilities and authorities, scope, safeguards, procedures, instructions and principles that are stated in the new Quality Manual.

Through this process, comprehensive risk analysis including assessment of customer past experience will be carried out prior to the start of each new project; each and every factor and process critical to quality (**CTQ**) will be determined and evaluated; related precautions will be taken in a timely manner; targets towards continuous improvement will be determined; deviations will be minimized and their recurrence prevented; by timely attainment of product quality via efficient resource utilization competitiveness will be sustained and thus customer satisfaction through superior service will be assured. Global Pipeline Engineering will ensure that the said Quality Policy will be comprehensible at every level of its institution, applicable to all its businesses and processes, sustainable and continuously improved by way of the lessons learned from undesired deviations.
